

Autoclave deodorant

3 fragrances : Classic, Poma and Citrus

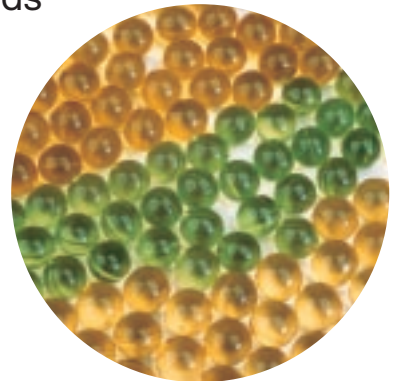

Anabac®

Autoclave deodorant

Laboratories are increasingly concerned with hygiene and cleanness in their workplace for obvious safety reasons. But are working conditions not just as important, once safety is ensured? **Anabac®** autoclave perfumes provide the discreet final touch which adds refinement to cleanness.

How to use

For an averagely-loaded 200-liter autoclave, place a capsule, preferably in a beaker of water, in the bottom of the autoclave before switching on. The capsule melts completely, leaving no residue and with no effect on the contents of the autoclave.

Classic

Based on extracts of mint and eucalyptus : freshness in the laboratory.

Poma

Based on extracts of apple : a feel of springtime.

Citrus

Based on extracts of lemon : the scent of cleanness.
